## Material and presentation

**Material:** Standard canvas, 400 gsm, on a 38 mm stretcher bar

**Edge treatment:** Current production configuration uses a black wrap.

## Bleed, crop and safe area

Do not build a manual wrap or bleed into the file. Keep important faces, names, logos and text away from the outer 5% guide. D'Decorations creates the production surface and wrap from the placement you approve.

## How approval works

1. Select the exact product and size. 2. Upload the original. 3. Review the immediate resolution result. 4. Move, zoom or rotate the artwork. 5. Generate and approve the final placement. Only that approved version is used for production.

Important: the on-screen preview represents crop and placement. Screen color, texture and physical material appearance remain approximate.
